

Centralizing unit with 24 inputs

LM 24 - M

Impulse CENTRALIZING UNIT

Impulse centralizing unit with 24 inputs and a communication bus RS-485

Description

- Impulse centralizing unit, with up to 24 devices. The inputs of the centralizing unit are optocoupled to read the said impulses and it also has a memory to store up to 32 bits of data
- It has an RS-485 communications port with an RS-232 or Ethernet converter that can read or write files with the **PowerStudio**

Application

- Reading any Impulse-emitting device (up to 24 units). These parameters are useful to generate receipts or define a price/unit cost
- Integration of other types of consumption, such as: gas, water, etc. or simply used to control the energy consumption of 24 meters
- As an alarm control station: acting on the status of the unit's outputs, being able to define an event or status
